

# INDUSTRIAL FLOOR TAPE

vs

# INDUSTRIAL FLOOR PAINT

THE AVERAGE FACTORY IN THE U.S. IS  
**600,000 SQ FT**

MANY OF THEM CONTAIN BETWEEN  
**5,000 TO 12,000 FEET**  
OF SAFETY & ORGANIZATIONAL LINES

**BUT**

MORE COMPANIES THAN EVER ARE  
CHOOSING FLOOR TAPE OVER PAINT  
... AND FOR GOOD REASONS.

## INSTALLATION

**FLOOR TAPE**  
requires no extra install equipment.

(most of them painted.)

**FLOOR PAINT**  
can require a range of additional tools and products, from rollers to industrial paint sprayers.

## WAIT TIME

**FLOOR TAPE**  
IMMEDIATE

**FLOOR PAINT**  
3-8 HRS

**CURE TIME**  
NONE

**FLOOR PAINT**  
72+ HRS

Waiting for paint to dry can cause significant downtime and can sometimes shut down entire factory floors for days, often times resulting in large monetary losses and delayed workflow.

Industrial floor tapes bond **immediately** after install, without having to wait for paint to dry or having to clear the air of toxic, dangerous fumes.

What's the holdup?

**FLOOR TAPE**  
Enhanced protection against:  
+ forklifts  
+ pallet jacks  
+ trucks  
+ foot traffic  
+ chemicals

**FLOOR PAINT**  
Fades and discolors quickly

Maintains appearance and durability over long periods

**FLOOR PAINT**  
Can be easily worn down by heavy foot traffic or ind'l equipment

Extremely easy to clean

**FLOOR PAINT**  
Chips and cracking will appear over time, requiring repainting

SAFETY TAC

#1 Rated Industrial Floor Tape

SafetyTac is the leading brand of industrial floor marking tapes for good reason. It's strong enough to hold up to forklift traffic as well as outlast paint and all other floor tapes on the market.
